- Tamil (Basics)

PROFILE

I am an aspiring Software Engineer currently pursuing my studies at ICET, with a clear focus on building a strong and successful career in the Information Technology industry. I have developed a solid foundation in programming principles, Object-Oriented Programming (OOP), JavaScript, Bootstrap, and React, enabling me to work confidently with both core programming concepts and modern web technologies. In addition, I am currently an undergraduate student following the MIT degree program at South Eastern University of Sri Lanka, further strengthening my academic and technical background in the field of Information Technology. I am highly passionate about continuous learning, problem-solving, and developing user-friendly, scalable software solutions. My long-term goal is to grow as a skilled and dedicated Software Engineer by contributing to innovative projects and adding meaningful value to the technology industry.

PROJECTS / WORK EXPERIENCE

- **Designed and developed a car rental management system** 2024 - 2025
  - Designed and developed a Car Rental Management System independently from home.
  - Used technologies such as Java, Spring Boot, and JavaScript for system development.
  - Developed features to manage car bookings, customer details, and rental records.
  - Improved system efficiency by organizing rental data and automating basic processes.

- **Developed a puzzle game using web technologies.** 2024

  Developed a physics-based puzzle game using HTML, CSS, JavaScript, and Matter.js, implementing interactive mechanics and collision physics.
